EXAMINER'S AMENDMENT AND STATEMENT OF REASONS FOR ALLOWANCE

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The abstract of the disclosure is objected to because it fails to meet the length requirements of 15 lines or 150 words. See MPEP § 608.01(b). A revised abstract follows.

A wavelength multiplex optical communication module is provided. This module consists of first to third optical waveguides on a substrate, the first waveguide coupled to the second waveguide, with a light emitting device disposed on the end of the first waveguide opposite the coupler. A wavelength filter is located at one end of the substrate in conjunction with ends of the second and third waveguide for passing a wavelength of light to a detector while reflecting a different wavelength to the third waveguide. By virtue of this construction, the communication module can realize various functions such as transmission or reception of signal light with a plurality of wavelengths. That is, light with a specific wavelength can be sent, or other specific light in the input light can be received or transferred to another site.

Allowable Subject Matter

Claims 1-18 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2877

As to claims 1, 4, 5, and 6, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a wavelength multiplex optical communication module, in combination with the rest of the limitations of the above claims.

Regarding the claims, the prior art of record discloses various aspects of the present invention, such as the use of a wavelength filter in an optical multiplexer in conjunction with a series of waveguides for transmitting a particular wavelength while reflecting others, and the use of detectors in conjunction with a multiplexer for wavelength reception. However, the prior art fails to show, either directly or in combination, the combination of elements disclosed in the present application. Namely, the prior art fails to disclose the use of a light emitting device, such as an LED, on a substrate in conjunction with first, second, and third waveguides, a wavelength filter, and an out of substrate photodetector, for the appropriate transmission and reception of varying wavelengths of light through the device as claimed through the functionality of the device imparted by the claims, along with the rest of the limitations and elements in the respective dependent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael A. Lyons whose telephone number is 571-272-2420. The examiner can normally be reached on Monday thru Thursday.

Art Unit: 2877

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frank G Font can be reached on 571-272-2415. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
